The Wholesale Market

Complex Structure

The structure of the gold market is facing an unprecedented wave of change resulting from evolving gold demand patterns, regulatory change, new types of participants and innovation.

Major Trading Centers

The three most important gold trading centres are the London OTC market, the US futures market and the Shanghai Gold Exchange (SGE). These markets comprise more than 90% of global trading volumes and are complemented by smaller secondary market centres around the world.

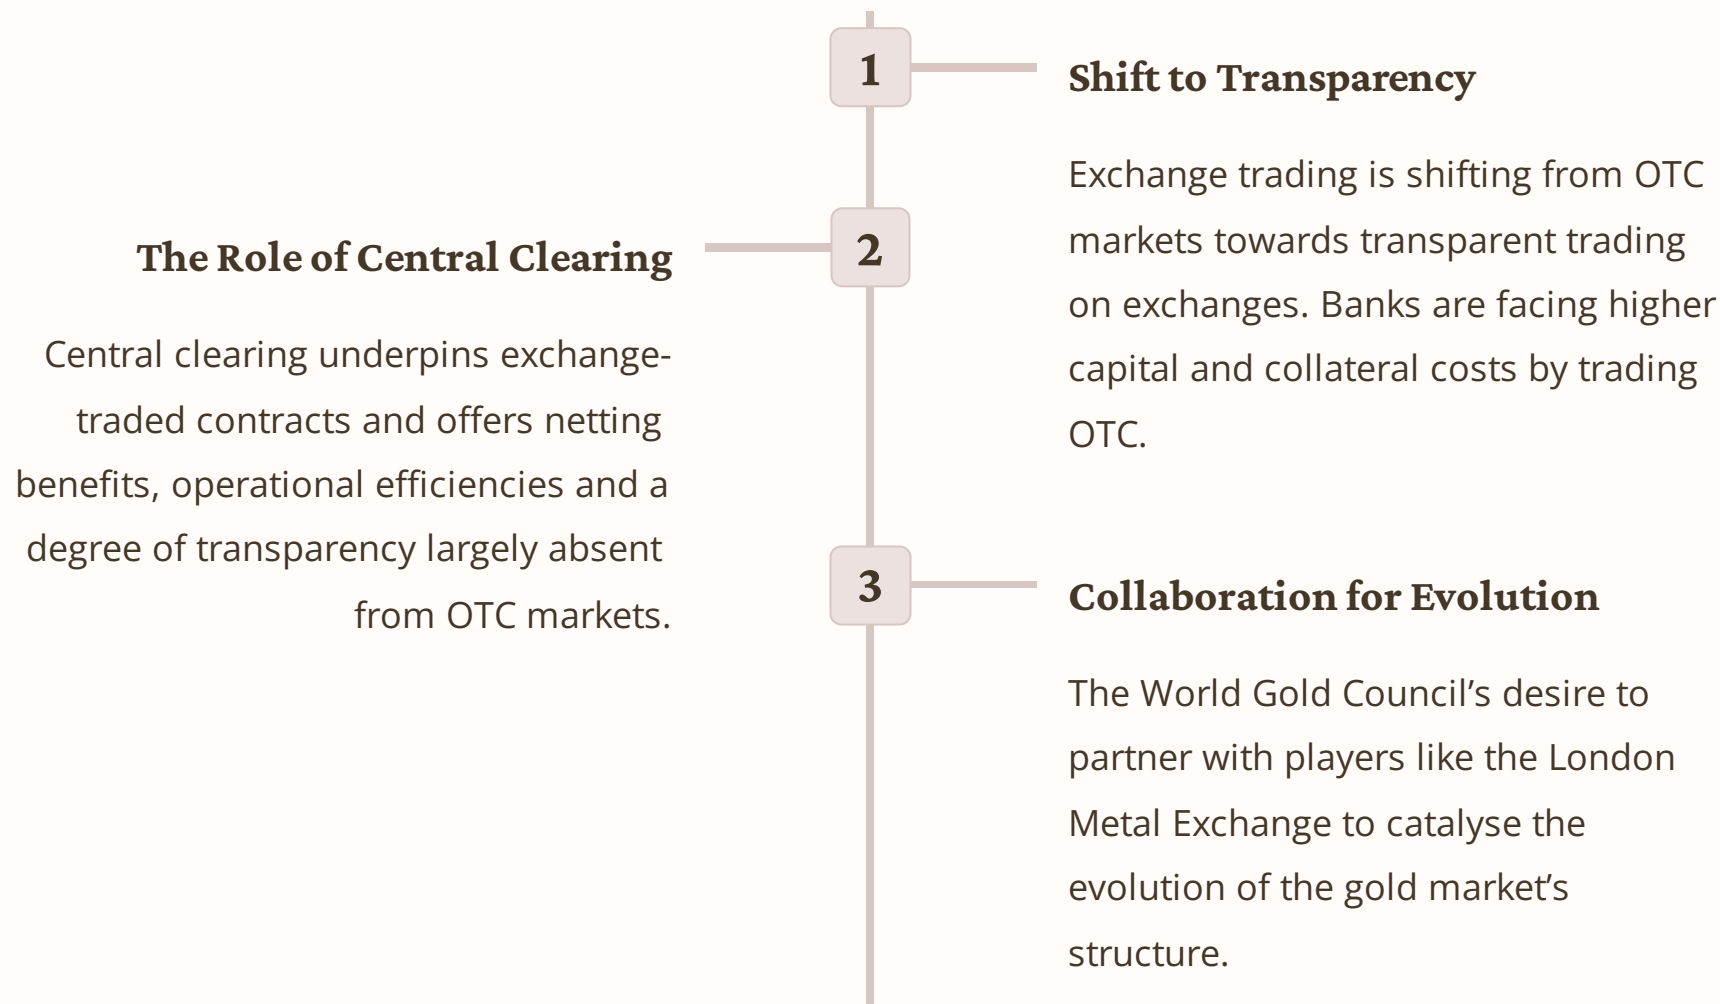

Shift from West to East

The market's demand profile continues to shift towards the East with China and India alone comprising more than half of global gold demand in recent years.

Regulatory Change

Partially as a function of regulatory change, there is a broad shift across asset classes from OTC markets towards transparent trading on exchanges. Banks, the primary intermediaries in the wholesale market, typically face higher capital and collateral costs by trading OTC.

Exchange Trading

Gold Investing

Industry Standards

Our work to establish concise and valuable industry standards helps to drive demand across retail gold investment and foster greater confidence in the market.
